PREFACE

“Agriculture production increased during the 2020 cropping season”

It is my pleasure to present to you the 2020 agricultural statistics bulletin, a tool for information access and evidence-based planning.

The agriculture sector experienced the impacts of COVID-19 as many farming households lost members who were active in either managing agricultural activities, creating employment and ensuring food security for the households.

The agriculture sector continued to be challenged by climate change impacts, animal diseases and crop pests, which led to reduced crop yields, nutritional quality of major cereal and reduced livestock productivity.

Despite these challenges, agriculture production increased in 2020 cropping season as a result of better rainfall performance compared to 2019 drought year which was declared as a State of Emergency.

Crop and Livestock farming remains major agricultural activities with value additions still at small scale. Major cereals are wheat, pearl millet and maize while cattle, goats and sheep are major livestock farmed in Namibia. There is also a surge of new poultry farmers especially in urban area.

There are efforts to accelerate the integration of substance farmers into the main commercial stream in response to the second land conference resolution 10. In 2020, the Katima Mulilo abattoir was renovated and opened for farmers to access formal markets through value addition on livestock-products.

This publication is intended to assist you, our esteemed readers, in planning, research, policy formation and decision-making. To make information available, the Ministry continues to improve and expand its data collection system. It is important to note that data in this publication has been revised, either as more up-to-date figures became available, or known errors were corrected.

This edition was made possible through the cooperation of the Agro-Marketing Trade Agency (AMTA), Bank of Namibia (BoN), Meat Board of Namibia, Nam Dairy, Namibian Agronomic Board (NAB), Namibia Statistics Agency (NSA), Pig Farm, Swakara and many other data/information providers. The Ministry is grateful for the continuous support in making

Namibia a leader in Agriculture.

INTRODUCTION

This edition of the Agricultural Statistics Bulletin is divided into three (3) sections, namely:

1. **The place of Agriculture in the economy** – this section provides an insight of the sector's contribution to the overall economy.
2. **The contribution of the major sub-sectors to the agricultural output** - this section indicates how each agricultural sub-sector contributed to the total agricultural output.
3. **Commodity production and price details** – this section indicates aggregate production by sub-sector and the changes in price over time.

Each section contains tables and charts with short summaries. The various tables and graphs contain time series data from the year 2016 through 2020. Data for the year 2020 was compared to 2016, 2017, 2018 and 2019 respectively, to monitor changes.

For the communal sector, partial data on grain and livestock production are available but information on agricultural produce and communal crops is estimated by the Agro-Business Information Services Unit, MAWLR. In addition, prices used are official and many of the commodities in the communal areas were either not sold or formally marketed.

This bulletin was developed in collaboration with various organizations. It should be noted that efforts have been made to standardize the data and definitions with those used in the National

Accounts published by the Namibia Statistics Agency (NSA). This publication also looks at contributions of the major sub-sectors to the agricultural output. Agricultural output measures the value of agricultural products produced in the country. However, calculations of Gross Domestic Product (GDP) data published in the National Accounts exclude raw materials, and goods and services consumed during the production process. This is because GDP is based on total value added in all resident domestic producing units.

SECTION 1: PLACE OF AGRICULTURE IN THE ECONOMY

This section highlights the performance and contribution of the agricultural sector to the Namibian economy in the calendar year 2020. Information includes the foreign exchange rates of Namibian dollars against key countries that Namibia mainly do agriculture trade with since 2016. The section also highlights exchange rates in months for the calendar year 2020.

Table 1.1a: World Currencies Exchange Rate per Namibian Dollars by Year

Currency	2016	2017	2018	2019	2020
US Dollar	14.71	13.31	13.23	14.45	16.46
British Pound	20.00	17.15	17.63	18.44	21.09
Euro	16.28	15.04	15.60	16.17	18.77

Table 1.1b: World Currencies Exchange Rate per Namibian Dollars by Month

Currency	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Average 2020
US Dollar	14.40	15.02	16.66	18.58	18.14	17.13	16.77	17.23	16.72	16.46	15.55	14.91	16.46
British Pound	18.82	19.47	20.60	23.04	22.28	21.46	21.22	22.63	21.70	21.37	20.53	20.02	21.09
Euro	15.98	16.38	18.41	20.18	19.76	19.29	19.21	20.38	19.73	19.37	18.40	18.14	18.77
Danish Kroner	2.23	2.31	2.64	2.72	2.61	2.61	2.68	2.72	2.63	2.54	2.48	2.41	2.55
China Yuan	2.08	2.15	2.37	2.63	2.55	2.42	2.39	2.48	2.45	2.45	2.35	2.28	2.38

Source: Bank of Namibia, 2021

The above table shows US dollar, British Pound, Euro, Danish Kroner and China Yuan currency exchange rate against the Namibian dollar (NAD) by months. The highest world currency exchange rate per Namibian dollar by month was recorded in April and August (Danish Kroner to NAD 2.72); April (USD to NAD18.85, British Pound to NAD 23.04, Yuan to NAD 2.63); August (and Euro to NAD 20.38). January was the least favourable month for exporting agricultural products as it had the lowest exchange rates per NAD.

Figure 1.1: World Currencies Exchange Rate per Namibian Dollar by Month

Figure 1.1, above is the graphical representation of the currencies exchange rate against the Namibian dollar by months in 2020. Overall, there were fluctuations in these currencies against the Namibian Dollar.

Figure 1.2: GDP by Primary and Secondary Sectors at Current Prices – Percentage Contribution

Table 1.2 and 1.3 shows GDP by Activity at Current Prices in Millions (N\$) and percentage contribution for Primary and Secondary sectors. The contribution position of the industries different in 2020 compared to the previous year; tertiary industry’s contribution to GDP remained the highest (59.05%) followed by the primary industry (18.76%) and secondary industry being the least (16.71%) contributor to GDP.

The Mining and quarrying sector remained the highest contributor to the GDP (9.61 %); followed by agriculture and forestry sector (6.6%). The least primary contributor is the fisheries sector (2.60%) during the review period.

In 2020, Agriculture contribution to GDP stood at 6.6 percentage

Improvements of the agriculture and forestry contribution to GDP (from 4.52 to 6.6 percent) was mainly attributed to livestock marketing. However, the crop subsector also improved its contribution from 1.64 to 2.94 compared to the previous year.

Section 2: Contribution of Major Sub-sectors to agricultural output

This section presents information on agricultural output which is different from Gross Domestic Product, as intermediary goods are not included in GDP calculation. Output is attained by multiplying the quantity of production by the prices of the commodity.

This is an estimate adjusted to the initial general price level of the year. In this section, an agricultural output is either livestock or crop sub-sector.

For example, the value of cattle is the monetary value of total number of cattle in Namibia. Furthermore, these are aggregates figures as they include commodities in both communal and commercial sector.

Table 2.1: Agricultural Output at Current Prices (Millions N\$)

	2016	2017	2018	2019	2020

Table 2.2 shows the percentage contribution of livestock and crops to the total agricultural output. During year 2020, the share of livestock and crops to the total agricultural output were 56.95 and 43.05 percent, respectively. On livestock sub-sector, cattle were the main contributor (47.16%) to total livestock output; while on crop sub-sector, grapes were the main contributor (8.47%) to the total agricultural output.

Figure 2.2: Composition of Percentage Contribution (%)

Figure 2.2 above illustrates the graphic representation of the contribution of livestock and crops to the total agricultural output.

SECTION 3: LIVESTOCK, CROPS and HORTICULTURAL PRODUCTS

This section presents information on production, prices, imports and exports of livestock and crops (cereal and horticultural products).

Table 3.1.1 shows the total counts of livestock in the country counted during vaccination. The data shows that, in 2020 there was a decrease in total number of sheep (16.00%), goats (16.38%) and poultry (14.53%) in comparison to 2019 figures. The production of ostriches and pigs showed an increase in year 2020. Despite the 15.94 percent reduction in cattle in the communal area, there was an overall increase in cattle production in 2020 as compared to 2019.

Table 3.1.2a, illustrates the beef industry performance over the period under review. There are no major variations in price per Kg of cattle slaughtered over the months of 2020. The lowest carcass mass (217.44Kg) was recorded during January while, the highest (276.36 Kg) was recorded during April. On average, the 2020 price per Kg of beef was N\$43.36 which is an increase of about 0.72 percent of the 2019 (N\$43.05) beef price. Carcass mass (Kg) of slaughtered cattle was relatively kept constant even during dry season at an average of 245.12 Kg, this is an indication of proper livestock rearing management.

In 2020, the average carcass weights was 245.12 Kg with an average price per Kg at N\$ 43.36

Table 3.1.2b shows the cattle marketed during the year 2016 to 2020. Focusing on year 2020, there was a decrease of 45.20 percent in live cattle exported when compared to 2019.

This was attributed to harsh drought conditions experienced in 2019 followed by Covid-19 regulations in 2020. In addition, export abattoirs recorded a huge decrease of 60.85 percent in live cattle intake while, local butcheries intake declined by 4.65 percent when compared to 2019. Despite the

operationalisation of the mobile abattoir in the Northern Communal Area since 2017, and thereopening of abattoirs in the NCA, only 0.05 percent of the total live cattle marketed were from the NCA in 2020.

Overall, there was a massive decline of 45.87 percent in the live cattle marketed in 2020 as compared to the previous year.

Focusing on year 2020, there was a decrease of 45.20 percent in live cattle exported when compared to 2019. This was attributed to harsh drought conditions experienced in 2019 followed by Covid-19 regulations in 2020

Table 3.1.3a shows the number of sheep and goats marketed locally and regionally. It is evident that sheep were the most marketed small stock through formal market during the year under review. Small stock marketed on hoof to the Republic of South Africa dominated the small stock industry with 66.2 percent of the total small stock marketed. Local butcheries accounted for 27.3 percent of the total small stock marketed with sheep being the highest. In summary, the number of sheep and goats marketed locally and regionally drastically decreased in 2020.

The figure below is the graphical representation of the number of small stock (sheep and goats) marketed for the past 5 years.

Figure 3.1.3a: Small Stock (Sheep and Goats) Marketed

Table above shows milk production and price for year 2020. The highest milk production was recorded in January, while the lowest milk production was recorded in September. There was decline of 21.04 percent in milk production in 2020 as compared to 2019 milk production. The table also indicates that the average milk price for the year 2020 was N\$6.20, which is a 2.46 percent increase of year 2019 average milk prices. Below is the graphical presentation of milk production and price for the year 2020.

The table above depicts the distribution of white maize by area planted, production, imports, and price.

The area planted (ha) increased dramatically (47.08%) in 2020 as a result of improvements in rainfall performance compared to the previous year. This subsequently led to a 37.93 percent increase in white maize production. Imports and food aid reduced by 33.82 percent. In

comparison to the past five years, in 2016, the highest producer price of N\$ 5598.90 per tonne of maize was achieved while in 2020 the producer price per tonne was N\$ 5077.00. The maize producer price for 2020 has increased by 8.27 percent when compared to 2019.

Table 3.2.3b shows the national cereal supply and demand (in thousand tonnes). The total domestic supply of cereal at the time of reporting was 215,800 tonnes. Included in this total is 40,900 tonnes opening stock as of June 2020 for domestic supply and 174,900 tonnes of total cereal production (wheat, maize and millet/sorghum). The total domestic utilization of cereal in Namibia was 356,600 tonnes with 321,600 tonnes used as food and 21,800 tonnes used as non-food (other uses). During 2020, the average cereal consumption per person (Per Capita Grain Consumption) was projected to be 123.69 kg, which is 8.02 percent lower than 2019 per capita grain consumption.

Note: North Central consists of Oshana, Omusati, Ohangwena and Oshikoto regions

Table 3.2.4a presents the cereal (with exception of Wheat) crop area planted and production in the Northern Communal Area (NCA). It shows that there was a huge increase in the production for all cereal crops (pearl millet, sorghum and maize) in the NCA during year 2020 as compared to 2019. It also indicates that there was an increase in area planted for millet & sorghum (74.26%) and maize (52.74%) area in 2020 as compared to 2019. However, there was a reduction of 11.06 percent in pearl millet price during 2020.

Table 3.2.4b: Cereal Production in the Northern Communal Areas by Regions

Table 3.2.4b shows the breakdown of cereals (pearl millet, sorghum & maize) in terms of area planted and production in the 7 major crops growing (communal) regions. The highest millet production (27,168 tonnes) was recorded in Oshikoto region, while the lowest (1,469 tonnes) was recorded in Zambezi region. Oshana region recorded the highest sorghum production (1,850 tonnes) with Kavango East and Kavango West recording the least combined production (89 tonnes). Maize production is only significant in Zambezi, Kavango East and Kavango West regions. Zambezi region recorded the largest area planted (12,489 ha) and production (8,350 tonnes) for maize.

The table above summarises the total area planted, production and imports for cereal. During the year 2020, pearl millet and sorghum occupied 90.31 percent of the total area planted (Ha), while maize and wheat occupied 9.02 and 0.67 percent, respectively. Cereal production increased significantly in year 2020 as compared to 2019. The total cereal production of 2020 was regarded as bumper harvest.

Others includes: asparagus, baby cabbage, baby marrow, beans green, beetroot, brinjals, broccolli, cabbage chinese, cauliflower, celery, chilli, chives, cocktail tomatoes, dates, endives, fennel, gem squash, guava, herbs, hubbard squash, kohlrabi, leeks, lemon, mango, marrows, mint, mushroom, okra, parsley, patty pans, paw paw, radish, spinach, spring onion, sprouts, strawberries, table celery, thyme, turnips, veg mix...

The table above shows the relative volume of domestic horticulture produce marketed through Agro-Marketing and Trade Agency (AMTA) during year 2016 to 2020. Among the locally produced horticulture, about 38 percent of potatoes was marketed locally followed by carrots (10.46%) while, sweet melons was the least marketed with 0.6 percent marketed locally. Overall, the tonnage of local marketed horticultural produce has increased with 10 percent in 2020. This could be attributed to continuous efforts by the Namibian Agronomic Board and AMTA in promoting crop production and marketing in the country.

Note: Most of the produces were sold throughout the year in different quantities however; this does not imply that these products were produced throughout the year or seasonally.

Table 3.3.1b above presents the monthly relative volume of domestic horticultural products marketed in tonnage. This table is an in-depth of Table 3.3.1a with reference to the 2020/21 marketing year. The highest produces marketed was recorded in December with 5539.94 metric tonnes followed by November with 4522.86 metric tonnes while February 2021 recorded the least 2187.81 metric tonnes.

Table 3.3.2a shows the annual imports of the horticultural products from 2016/17 to 2020/21 marketing years. The importation of horticultural products has been on a rise over the years.

During 2020/21 marketing year, potatoes (37.39 %) was the highest produces imported followed by apples (16.31%), while the cabbages (0.05%) were the least imported. Notwithstanding the increase recorded in domestic horticultural produce for the year 2020/21, the overall horticulture imports increased with about 10 percent.

Table 3.3.2b presents monthly horticultural products imports for the 2020/21 marketing year. As shown, potatoes and apples were the most horticultural products imported in 2020/21. The highest imports were recorded during July 2020, while the least was recorded in December 2020. Cabbages were the least imported product, with the yearly total of 37.53 tonnes and the lowest quantity recorded in January.

3.3.3 : HORTICULTURAL PRODUCTS - EXPORTS

Table 3.3.3: Relative Volume of Horticultural Products - Exports

	2016	2017	2018	2019	2020
Total Export (tonnes)	41412.32	55195.96	49859.01	45695.90	49,871.60
Brinjals	-	-	128.41	0.01	12
Butternuts	1699.96	757.34	1768.61	1614.51	739
Cabbage				109.00	
Chillies				22.58	4
Dates	184.35	1060.38	1445.73	1902.70	1,595
English Cucumber	-	245.80	93.50	122.90	93
Gem Squash				40.93	60
Grapes	23884.47	31804.00	29761.77	32,029.08	39,233
Mango				222.22	143
Onions	8806.87	7537.24	8353.18	3502.71	4,001
Pepper	1543.39	2368.91	966.68	943.96	266

Source: Namibian Agronomic Board, 2022

Table 3.3.3 shows the volume of exported horticultural products for the year 2016 to 2020. During 2020, grapes were the most exported horticultural produce in Namibia, comprising 78.67 percent of the total export, followed by onions (8.02 %) and tomatoes (4.22 %). There was an increase of 9.14 percent in exportation of horticultural product in 2020 as compared to 2019.

APPENDIX 1: EXPLANATORY NOTES

CROPS

Cereals

Cereal estimates reported in this Bulletin have been collected from the Namibian Agronomic Board (NAB) and the Agro Business Information Services Section (Early Warning Unit) within the Ministry of Agriculture, Water and Land Reform. The NAB provides estimates for controlled commercial crops (wheat, white maize and pearl millet/mahangu). Early Warning Unit provides “provisional estimates” for communal cereal crops for specific cropping seasons. Provisional estimates are preliminary in nature and not always reliable.

Estimates provided by NAB are captured from administrative records and those provided by Early Warning Unit are calculated based on rapid assessment conducted on the seven northern crop growing regions. The latter is supposed to be replaced by actual estimates as soon as they become available from Annual Agricultural Surveys conducted by the Namibia Statistics Agency (NSA).

For summer crops e.g. white maize, the main planting season is from the third quarter of the year and harvesting takes place in the second quarter of the next year, followed by the second cycle of planting. Thus, for the main production, the cropping season starts during October-November; harvest follows during May-June and marketing continues thereafter. Simultaneously, while marketing the harvest from the main production the second planting begins. Winter crops (wheat) are however planted and harvested within the same calendar year. Figures in tables for white maize and wheat have been updated as per latest figures provided by NAB during 2021.

Horticultural products

The production, import and export data are all collected from the Namibian Agronomic Board. However, production figures only include local production that was marketed through them and Agro Marketing and Trade Agency (AMTA).

AGRICULTURAL OUTPUT

The agricultural Output data were all collected from NSA. Where Output is calculated as follows:

Output = Q x P where Q is the quantity and P is the price in year 1.

In order to calculate output for the summer crops for instance, in absence of the actual floor price for that particular year, estimation should be made on the cost and prices for that specific year. In order to be consistent with the method used by the Namibia Statistics Agency (NSA) in the estimation of National Accounts, all crops are calculated as though they are planted and harvested in one year.

Prices

All prices are producer prices. Average auction prices, abattoir and primary market prices are mostly used. “Current prices” referred to herein are the prices paid for a commodity in the specified year. For the table at “current prices” the output for each commodity is calculated using the price paid for the commodity in each of the years considered, hence changes in output reflects changes in price and quantity.

Missing data

Whenever ‘Blank’ is used it indicates missing information;

A ‘0’ indicates that during that specific month/year there was no production, imports, exports or trade took place.

Negative Values

Brackets indicates all negative values
